

Tutorial Activity -1

Name- Sajja Patel

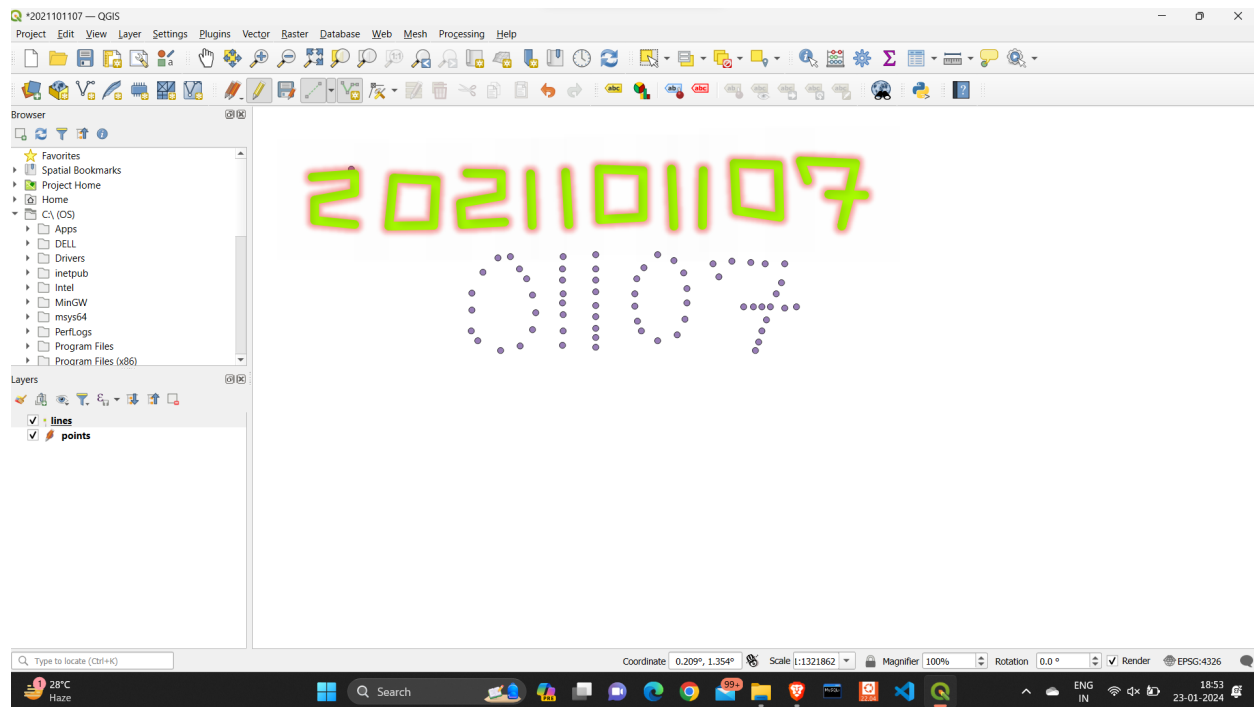

Roll no.- 2021101107

Task-1

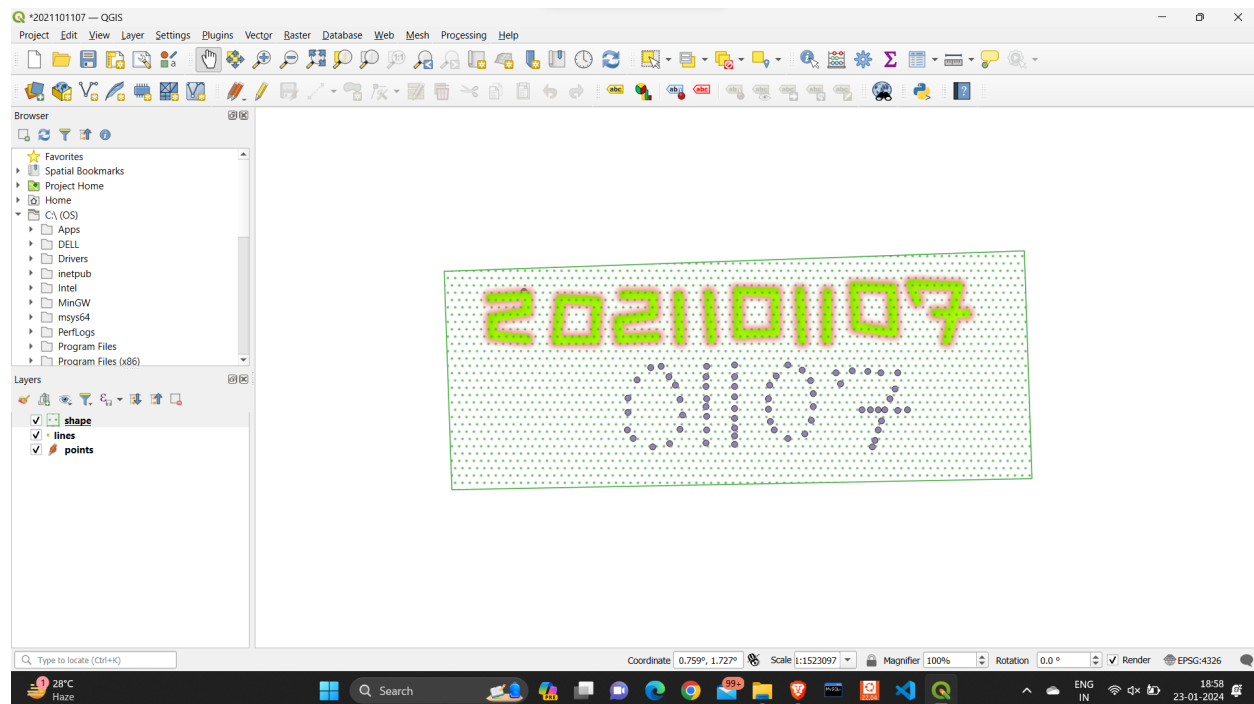

- Point shape file

- Lines shape file

- Polygon shape file

Task-2

In this process, we utilized QGIS to overlay and visualize three distinct vector shapefiles —Kukatpally Boundary, Points, and Stream Lines. By loading and arranging these layers within the QGIS environment, we ensured a cohesive display of point, line, and polygon features, facilitating a comprehensive understanding of spatial relationships within the dataset.
